5	APPENDIX	A. [insert name here]		1
6	APPENDIX	B. [insert name here]		1

# 1 Introduction

The sQuire Collaborative IDE is a collaborative IDE software project for CS383-01. The intended audience for this project is Java programmers looking for a more social collaborative experience. A large focus of the program is also to help programmers connect with others who may interested in their projects.

### 1.1 IDENTIFICATION

The software system being considered for development is referred to as sQuire. The customer providing speci cations for the system is Dr. Je ery and the CS383-01 class. The ultimate customer, or end-user, of the system will be Java programmers. This is a new project e ort, so the version under development is version 1.0.

### 1.2 PURPOSE

The purpose of the system under development is to provide Java programmers with a more social collaborative experience. Instead of individual methods of source control, sQuire will provide an environment where programmers can work together in the same environment and instantly see the e ect of others' code. While the system will be used by Java programmers, this document is intended to be read and understood by UI CS software designers and coders. The document will also be vetted or approved by Team 4.

### 1.3 SCOPE

This paragraph shall brie y summarize the history of system development, operation, and maintenance; identify the project sponsor, acquirer, user, developer, and support agencies; identify current and planned operating sites; and list other relevant documents.

This project is sponsored by the CS383-01 class and is being worked on by Team ICY (4) from scratch. The goal is to have a working prototype by the end of the Spring 2016 semester. We plan to operate individually for the most part by programming from our own machines at home for about 10 hours per week. We also plan on using a Windows Server running in a VM at Domn Werner's house.

# 1.4 DEFINITIONS, ACRONYMS, AND ABBREVIATIONS

This section shall list and de ne all special terms, acronyms and abbreviations used throughout this document. A tabular form is preferable, but not mandatory.

Term or Acronym	De nition
Alpha test	Limited release(s) to selected, outside testers
Beta test	Limited release(s) to cooperating customers wanting early access to developing systems
Final test	aka, Acceptance test, release of full functionality to customer for approval
DFD	Data Flow Diagram
SDD	Software Design Document, aka SDS, Software Design Speci cation
SRS	Software Requirements Speci cation
SSRS	System and Software Requirements Speci cation

IDE	Integrated Development Environment		

### 1.5 REFERENCES

This section shall list full bibliographic citations of all documents referenced in this report. This section shall also identify the source for all materials not available in printed form (e.g., web-based information) and list the complete URL along with owner, author, posting date, and date last visited.

[insert your citations here]

### 1.6 OVERVIEW AND RESTRICTIONS

This paragraph shall describe the organization of this document and shall describe any security or privacy considerations associated with its use.

This document is for limited release only to UI CS personnel working on the project and [ state others who will receive the document ].

Section 2 of this document describes the system under development from a holistic point of view. Functions, characteristics, constraints, assumptions, dependencies, and overall requirements are de ned from the system-level perspective.

Section 3 of this document describes the speci c requirements of the system being developed. Interfaces, features, and speci c requirements are enumerated and described to a degree su cient for a knowledgeable designer or coder to begin crafting an architectural solution to the proposed system.

Section 4 provides the requirements traceability information for the project. Each feature of the system is indexed by the SSRS requirement number and linked to its SDD and test references.

Sections 5 and up are appendices including original information and communications used to create this document.

# 2 OVERALL DESCRIPTION

The sQuire project is an answer to the lack of real-time collaborative programming experiences. By bringing programmers together in a more social environment, this program aims to improve collaboration between programmers in a much more fast paced and agile methodology. Furthermore, for programmers who seek others to help with their projects, sQuire aims to provide a simple social platform for engaging with other programmers and start working on a project together.

### 2.1 PRODUCT PERSPECTIVE

This program will either be a standalone executable with many linked DLLs or a web application that can run on most modern web-browsers with internet access.

### 2.2 PRODUCT FUNCTIONS

This subsection of the document should provide a summary of the major functions that the software will perform. For the sake of clarity, the functions should be organized in a way that makes the list of functions understandable to the customer or to anyone else reading the document for the rst time. Textual or graphical methods can be used to show the di erent functions and their relationships. Such a diagram is not intended to show a design of a product, but simply shows the logical relationships among variables.

[insert your text here]

### 2.3 USER CHARACTERISTICS

This subsection of the document should describe those general characteristics of the intended users of the product including educational level, experience, and technical expertise. It should not be used to state speci c requirements, but rather should provide the reasons why certain speci c requirements are later speci ed in Section 3 of this document.

[insert your text here]

# 2.4 CONSTRAINTS

This subsection of the document should provide a general description of any other items that will limit the developer's options. These include: a) Regulatory policies; b) Hardware limitations (e.g., signal timing requirements); c) Interfaces to other applications; d) Parallel operation; e) Audit functions; f) Control functions; g) Higher-order language requirements; h) Signal handshake protocols; i) Reliability requirements; j) Criticality of the application; k) Safety and security considerations.

[insert your text here]

### 2.5 ASSUMPTIONS AND DEPENDENCIES

This subsection of the document should list each of the factors that a ect the requirements stated in the document. These factors are not design constraints on the system and/or software but are, rather, any changes to them that can a ect the requirements in the document. For example, an assumption may be that a speci c operating system will be available on the hardware designated for the software product. If, in fact, the operating system is not available, the document would then have to change accordingly.

[insert your text here]

# 2.6 SYSTEM LEVEL (NON-FUNCTIONAL) REQUIREMENTS

This subsection of the document should identify system level (whole, not functional) requirements that impact the construction, operation, packaging and delivery of the system and software.

### 2.6.1 Site dependencies

This paragraph shall specify site-dependent operational parameters and needs (such as parameters indicating operation-dependent targeting constants or data recording). The requirements shall include, as applicable, number of each type of equipment, type, size, capacity, and other required characteristics of processors, memory, input/output devices, auxiliary storage, communications/ network equipment, and other required equipment or software that must be used by, or incorporated into, the system. Examples include operating systems, database management systems, communications/network software, utility software, input and equipment simulators, test software, and manufacturing software. The correct nomenclature, version, and documentation references of each such device or software item shall be provided.

- 1. Central SQL Server
- 2. Host-side Project Server
- 3. Collaborator-side Client

The Central server stores user credentials, project descriptions, and user pro le and achievement data. Requirements for Central SQL Server

- 1. Host with high uptime percentage
- 2. SQL capable
- 3. E-mail capable for password resets
- 4. Fast enough connection to prevent login timeout, even while handling multiple requests
- 5. Prefer host with multiple backups

The Host-side server stores the project les, project access list, hosts the editing environment, runs chat channels, and serves les to collaborators for compiling.

Requirements for Host-side Server

- 1. Java Capable (http://java.com/en/download/help/sysreq.xml)
- 2. SQL Capable (WAMP/LAMP)
- 3. 4 GB RAM
- 4. Hard drive space for server + project les

The client side application connects to the host server, renders GUI elements, stores connection pro les, stores server les, and compiles the project.

Requirements for Collaborator-side Client

- 1. Java Capable (http://java.com/en/download/help/sysreq.xml)
- 2. Project speci ed Java installed
- 3. 2 GB RAM
- 4. Hard drive space for project les

### 2.6.2 Safety, security and privacy requirements

This paragraph shall specify the system requirements, if any, concerned with maintaining safety, security and privacy. These requirements shall include, as applicable, the safety, security and privacy environment in which the system must operate, the type and degree of security or privacy to be provided, and the criteria that must be met for safety/security/privacy certi cation and/or accreditation.

The collaborative nature of sQuire includes several concerns for security and privacy. The program will include in the license agreement the following stipulations:

- 1. sQuire is a free development environment, and may be used for commercial purposes
- 2. No guarantee of code con dentiality is implied by use of sQuire
- 3. Clients assume the risk of downloading, compiling, and running project les
- 4. Email addresses are visible as part of a user pro le
- 5. Host assume the risk of allowing peers to connect to their server

However, the program will provide the following minimum features to address security and privacy concerns:

- 1. All SQL servers will include input sanitization and appropriate anti-injection safeguards
- 2. Project hosts may turn o guest access to their project
- 3. Uploads for assets will be limited to folders within the project directory
- 4. Visibility to host le structure will be limited to project folders only

#### 2.6.3 Performance requirements

This paragraph should specify both the static and the dynamic numerical performance requirements placed on the software or on human interaction as a whole. Static numerical requirements may include the following: a) The number of terminals to be supported; b) The number of simultaneous users to be supported; c) Amount and type of information to be handled. Dynamic numerical requirements may include, for example, the numbers of transactions and tasks and the amount of data to be processed within certain time periods for both normal and peak workload conditions. All of these requirements should be stated in measurable terms. For example, 95% of the transactions shall be processed in less than 1msec.

- 1. Up to 33 concurrent connections will be supported
- 2. Edits will be visible to all connected collaborators within 10 seconds
- 3. Login and server connections will report success or failure within 45 seconds

### 2.6.4 System and software quality

This paragraph shall specify the requirements, if any, concerned with hardware and software quality factors identi ed in the contract. Examples include quantitative requirements regarding the system's functionality (the ability to perform all required functions), reliability (the ability to perform with correct, consistent results), maintainability (the ability to be easily corrected), availability (the ability to be accessed and operated when needed), exibility (the ability to be easily adapted to changing requirements), portability (the ability to be easily modi ed for a new environment), reusability (the ability to be used in multiple applications), testability (the ability to be easily and thoroughly tested), usability (the ability to be easily learned and used), and other attributes.

Adaptability

- 1. The program will allow selection of di erent compiling programs and command line arguments.
- 2. The program will allow importing of les of key words to allow other development languages to be used.

### 2.6.5 Packaging and delivery requirements

This paragraph shall specify the requirements, if any, for packaging, labeling, handling and delivery of the system being developed to the customer.

The executable system and all associated documentation (i.e., SSRS, SDD, code listing, test plan (data and results), and user manual) will be delivered to the customer on CD's and/or via email, as speci ed by the customer at time of delivery. Although document drops will occur throughout the system development process, the nal, edited version of the above documents will accompany the nal, accepted version of the executable system.

#### 2.6.6 Personnel-related requirements

This paragraph shall specify the system requirements, if any, included to accommodate the number, skill levels, duty cycles, training needs, or other information about the personnel who will use or support the system under development. These requirements shall include, as applicable, considerations for the capabilities and limitations of humans; foreseeable human errors under both normal and extreme conditions; and speci c areas where the e ects of human error would be particularly serious. Examples include requirements for color and duration of error messages, physical placement of critical indicators or keys, and use of auditory signals.

The system under development has no special personnel-related characteristics.

### 2.6.7 Training-related requirements

This paragraph shall specify the system requirements, if any, pertaining to training. Examples include training software, tutorials, or help information to be included in the system.

No training materials or expectations are tied to this project other than the limited help screens built into the software and the accompanying user manual.

#### 2.6.8 Logistics-related requirements

This paragraph shall specify the system requirements, if any, concerned with logistics considerations. These considerations may include: system maintenance, software support, system transportation modes, supply-system requirements, impact on existing facilities, and impact on existing equipment.

[ Insert a description of the minimum hardware requirements and OS and application software dependencies here ]

### 2.6.9 Other requirements

This paragraph shall specify additional system level requirements, if any, not covered in the previous paragraphs.

[ insert your text here ]

### 2.6.10 Precedence and criticality of requirements

This paragraph shall specify, if applicable, the order of precedence, criticality, or assigned weights indicating the relative importance of the requirements in this speci cation. Examples include identifying those

requirements deemed critical to safety, to security, or to privacy for purposes of singling them out for special treatment. If all requirements have equal weight, this paragraph shall so state.

[ insert your text here ]

# 3 SPECIFIC REQUIREMENTS

# 3.1 Functional Requirements

### 3.1.1 Project Browsing

These requirements involve the ability for users to nd and learn about projects that they may wish to contribute to. Users shall be able to:

- 1. See a list of open projects.
- 2. Filter or search projects.
- 3. View more information about a speci c project.
- 4. Upvote and downvote projects.
- 5. Comment on projects and interact with its contributors.
- 6. Request to join a speci c project.

### 3.1.2 Authentication

These requirements involve the ability for users to have individual accounts and the security that comes from that. Users shall be able to:

1. Sign up for a sQuire user account.

Use Case Description:S3.3.2

Sequence Diagram:S3.3.3

2. Log in to the program using their user account.

Use Case Description:S3.3.4

Sequence Diagram:S3.3.5

3. Log out of the program using their user account.

Use Case Description:S3.3.6

Sequence Diagram:S3.3.7

4. Change their password.

Use Case Description:S3.3.8

Sequence Diagram:S3.3.9

5. Change their email.

Use Case Description:S3.3.10

Sequence Diagram:S3.3.11

6. Change their username.

Use Case Description:S3.3.12

Sequence Diagram:S3.3.13

### 3.1.3 Communication

These requirements involve the ability for users to be able to communicate with other users. Users shall be able to:

- 1. Open and close project chat.
- 2. Write to project chat.
- 3. Read from project chat.
- 4. Message a user by their name.
- 5. Leave a comment in a le.

### 3.1.4 File Management

These requirements involve the ability for users to manage the les that compose a project. Users shall be able to:

- 1. Open one or more les.
- 2. Close one or more les.
- 3. Delete one or more les.
- 4. Download one or more les.
- 5. Add a new le to the project.
- 6. Add an existing le to the project.
- 7. Save one or more les.

# 3.1.5 File Editing

These requirements involve the collaborative editor part of sQuire. Users shall be able to:

1. Enable or disable line numbers.

Use Case Description:S3.3.53

Sequence Diagram:S3.3.54

2. Enable or disable viewing reference counts above each line.

Use Case Description:S3.3.55

Sequence Diagram:S3.3.56

3. Enable or disable viewing date of last edit above each line.

Use Case Description:S3.3.57

Sequence Diagram:S3.3.58

4. Enable or disable view author of each line.

Use Case Description:S3.3.59

Sequence Diagram:S3.3.60

5. Comment/Uncomment a selected section code.

Use Case Description:S3.3.64 Sequence Diagram:S3.3.65

6. Format the document to adhere to code style.

Use Case Description:S3.3.61

7. Find/Replace speci ed text.

Use Case Description:S3.3.62

Sequence Diagram:S3.3.63

- 8. View text highlighted by other users.
- 9. Type text and have the system apply syntax coloring for Java les and display errors.

Use Case Description:S3.3.68

Use Case Description:S3.3.70

Sequence Diagram:S3.3.69

Sequence Diagram:S3.3.71

10. View other users' carets as they type.

Use Case Description:S3.3.66

Sequence Diagram:S3.3.67

### 3.1.6 Project Management

These requirements involve the management of entire projects. Users shall be able to:

- Compile a project. See use case description and sequence diagramoject Management Feature
   Compile and Execute Project
- 2. Execute a compiled project. See use case description and sequence diagramoject Management Feature 1: Compile and Execute Project Use Case Description
- 3. Create a new project. See use case description and sequence diagramoject Management Feature2: Create project
- 4. Delete a project. See use case description and sequence diagramoject Management Feature 3: Delete project
- 5. Invite a user to a project. See use case description and sequence diagramoject Management Feature 7/8: Invite/Respond to Project Invite
- 6. Join a project. See use case description and sequence diagratroject Management Feature 4/5: Request/Manage Request to Join Project
- 7. Leave a project. See use case description and sequence diagramoject Management Feature 6: Leave Project

### 3.1.7 Project User Management

These requirements involve project admins managing their Users. Admins shall be able to:

1. Add users to a project.

Use Case Description:S3.3.49 Sequence Diagram:S3.3.50

2. Remove users from a project.

Use Case Description:S3.3.51 Sequence Diagram:S3.3.52

3. Change user permissions to a project.

Use Case Description:S3.3.53 Sequence Diagram:S3.3.54

#### 3.1.8 User Preferences

These requirements involve managing user preferences. Users shall be able to:

- 1. Update their username.
- 2. Update their password.
- 3. Update their email address.
- 4. Update their biography.
- 5. Update their display name.
- 6. Enable receiving email updates.
- 7. Enable receiving messages from any user.
- 8. Display their email address to selected groups.
- 9. Change program colors.

### 3.2 EXTERNAL INTERFACE REQUIREMENTS

This subsection should be a detailed description of all inputs into and outputs from the software system. It should complement the constraints and dependencies de ned in earlier sections, but not repeat that information. Hardware, software, user, and other communication interfaces need to be specified. Use the four subsections listed below or the table on the next page, or some combination of both.

#### 3.2.1 Hardware Interfaces

[ insert your text here ]

#### 3.2.2 Software Interfaces

### 3.3 SYSTEM FEATURES

Functional requirements should de ne the fundamental actions (i.e., features) that must take place in the software in accepting and processing the inputs and in processing and generating the outputs. These requirements are given in the form of Use Cases where possible, denoting a concrete use (discrete user-performable task) of the system. Use case diagrams are followed by use case descriptions, followed by any non-task features. Non-task features are generally listed as shall statements starting with The system shall... These include: a) Validity checks on the inputs; b) Exact sequence of operations; c) Responses to abnormal situations, including error detection, handling and recovery; d) Parameter speci cation and usage; e) Relationship of outputs to inputs, including formulas for input to output conversion.

It may be appropriate to partition the functional requirements into sub functions or subprocesses, but that decomposition (here) does not imply that the software design will also be partitioned that way. You should repeat subsections 3.3.i for every speci ed feature de ned for the system or software.

### 3.3.1 Use Case Diagram 1: Authentication

### 3.3.2 Authentication Feature 1: Sign Up Use Case Description

Actors: User

Summary: The user signs up and creates an account using their email address and creates username and password in order to access the program.

Purpose: To register and create an account in the program

Preconditions: None

#### Steps:

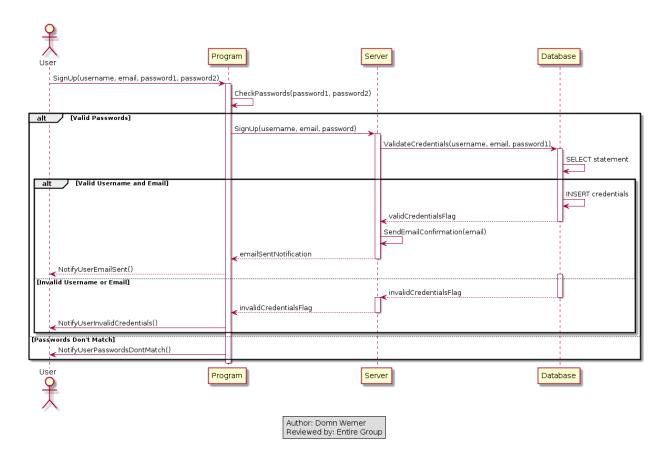

- 1. User clicks Register button.
- 2. System prompts the user to enter email and password.
- 3. User enters email and password and clicks Submit button.
- 4. System sends con rmation email.
- 5. User veri es email by clicking a link.
- 6. System adds veri ed user to database.

Alternative 1: User already has an account.

Alternative 2: User doesn't con rm email. Delete request after timeout period.

- ^ User in S3.4.5
- ^ Email in S3.4.5
- ^ Validator in S3.4.5
- ^ UserController to be added.
- ^ ServerController to be added.
- ^ Database to be added.

# 3.3.3 Authentication Feature 1: Sign Up Sequence Diagram

# 3.3.4 Authentication Feature 2: Log In Use Case Description

Actors: User

Summary: A registered logs in to the program in order to access its features.

Purpose: Allow registered users access to the program.

Preconditions: User must already have a registered account.

# Steps:

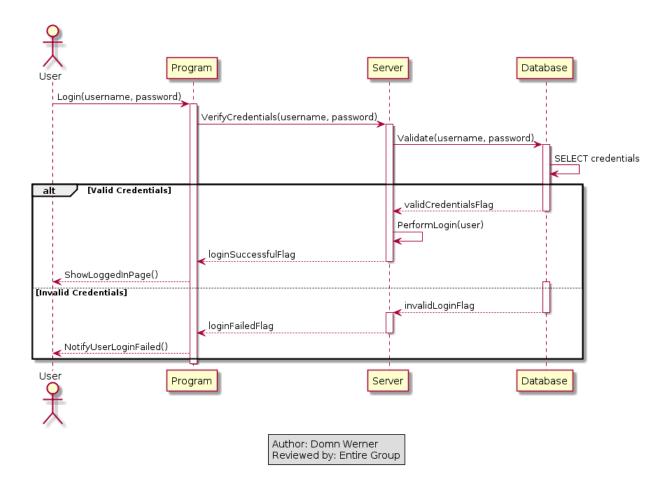

- 1. Users clicks Log In button.
- 2. System prompts the user for their username and password.
- 3. User enters their login information.
- 4. System veri es the login information and grants user access to their account.

### Alternatives:

- 1. User enters incorrect information. System prompts for credentials again.
- 2. User has not clicked email con rmation. System resends email and tells user.
- 3. User makes 5 incorrect login attempts. System prevents more login attempts for 5 minutes.

- ^ User in S3.4.5
- ^ UserController to be added.
- ^ ServerController to be added.
- ^ Database to be added.

# 3.3.5 Authentication Feature 2: Log In Sequence Diagram

# 3.3.6 Authentication Feature 3: Log Out Use Case Description

Actors: User

Summary: A user logs out of the program.

Purpose: Allows logged in users to log out in order to protect their account.

### Preconditions:

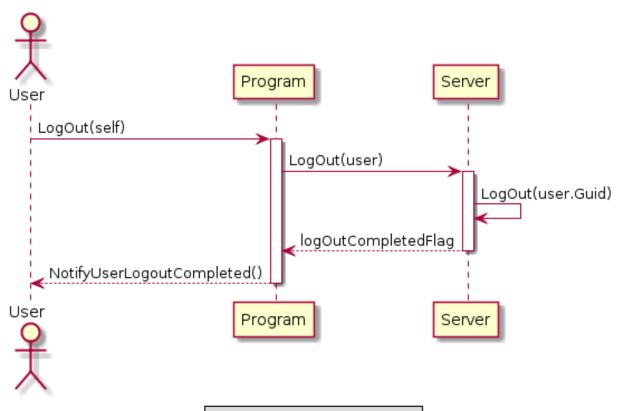

- 1. User must have a registered account.
- 2. User must be logged in.

### Steps:

- 1. Users clicks log out button.
- 2. System logs user out.
- 3. Browser cookies are updated to re ect user being logged out.

- ^ User in S3.4.5
- ^ UserController to be added.
- ^ ServerController to be added.
- ^ Database to be added.

# 3.3.7 Authentication Feature 3: Log Out Sequence Diagram

Author: Domn Werner Reviewed by: Entire Group

# 3.3.8 Authentication Feature 4: Change Password Use Case Description

Actors: User

Summary: A user changes their password while logged in.

Purpose: Allows logged in users to change their passwords.

### Preconditions:

- 1. User must have a registered account.
- 2. User must be logged in.

#### Steps:

- 1. Users clicks Change Password button.
- 2. System prompts user to enter their password twice.
- 3. User enters their password twice.
- 4. System hashes both passwords.

### Alternatives:

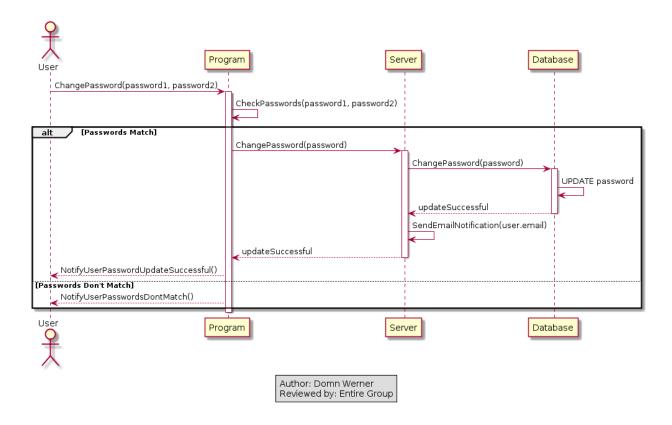

- 1. If passwords match, System updates user password and sends email to registered email account.
- 2. If passwords don't match, system noti es user.

# Related Use Cases:

- 1. Change Email
- 2. Change Username

- ^ User in S3.4.5.
- ^ Email in S3.4.5.
- ^ Validator in S3.4.5.

# 3.3.9 Authentication Feature 4: Change Password Sequence Diagram

# 3.3.10 Authentication Feature 5: Change Email Use Case Description

Actors: User

Summary: A user changes their email while logged in.

Purpose: Allows logged in users to change their email.

### Preconditions:

- 1. User must have a registered account.
- 2. User must be logged in.

### Steps:

- 1. User clicks Change Email button.
- 2. System prompts user to enter their email.
- 3. User enters their email.
- 4. System sends a con rmation link to the email entered.

### Alternatives:

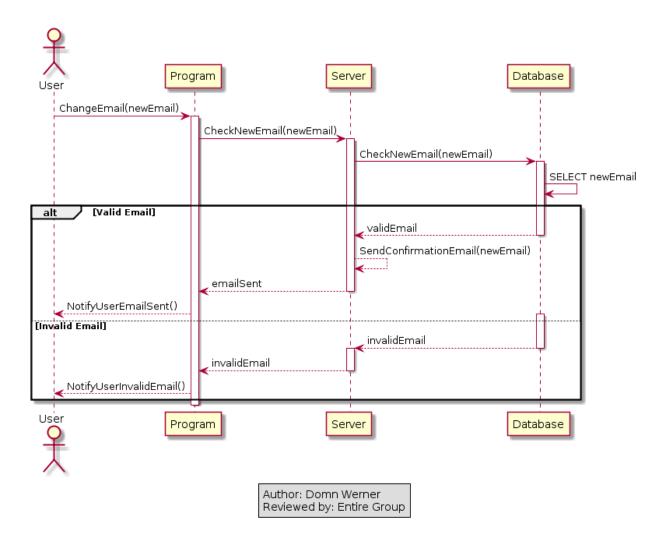

- 1. If User clicks con rmation link, System updates the user's email and sends an email to the new email stating so.
- 2. If user doesn't click con rmation link in an hour, the link becomes invalid.

### Related Use Cases:

- 1. Change Password
- 2. Change Username

- ^ User in S3.4.5.
- ^ Email in S3.4.5.
- ^ Validator in S3.4.5.
- ^ UserController to be added.

# 3.3.11 Authentication Feature 5: Change Email Sequence Diagram

### 3.3.12 Authentication Feature 6: Change Username Use Case Description

Actors: User

Summary: A user changes their username while logged in.

Purpose: Allows logged in users to change their username.

### Preconditions:

- 1. User must have a registered account.
- 2. User must be logged in.

#### Steps:

- 1. Users clicks Change Username button.
- 2. System prompts user to enter a new username.
- 3. User enters a username and clicks Change Username.

### Alternatives:

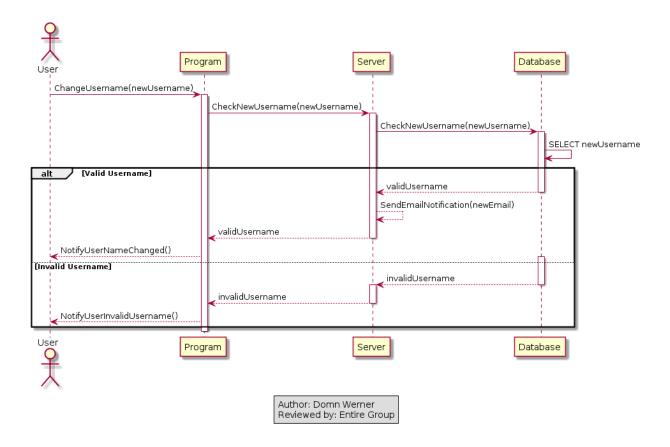

- 1. If username doesn't exist, System changes the user's username and noti es the user in the UI and through an email.
- 2. If username exists, System asks user to enter a di erent username.

### Related Use Cases:

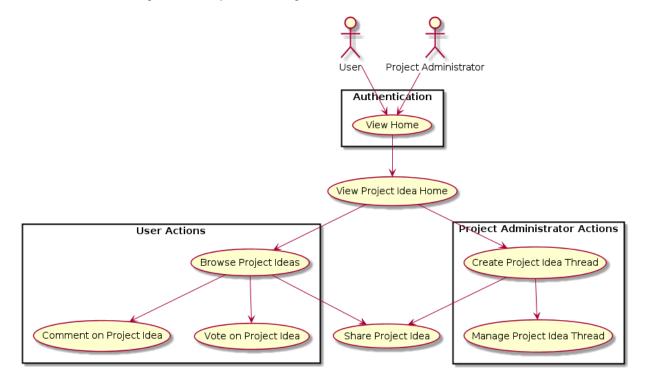

- 1. Change Password
- 2. Change Email

- ^ User in S3.4.5.

# 3.3.14 Use Case Diagram 2: Project Browsing

# 3.3.15 Project Browsing Feature 1: Project Browsing Use Case Description

Actors: User

Summary: User looks through posted project ideas to nd projects to work on and/or discuss.

Purpose: To nd and view projects relevant to the user's search parameters

Preconditions: User is signed in

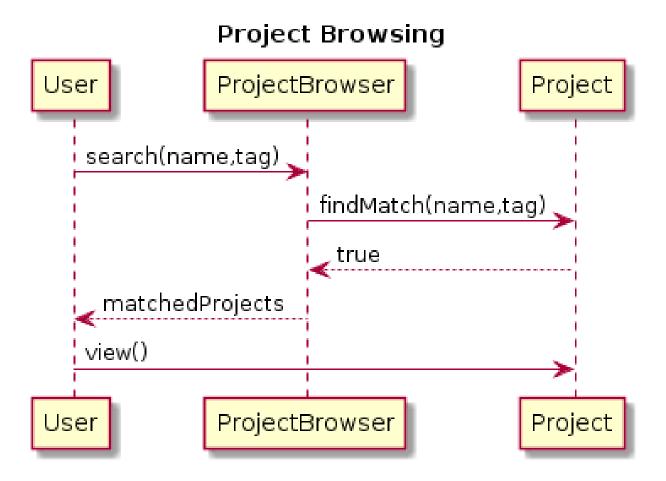

# Steps:

- 1. Actor selects Browse Project Ideas button
- 2. Actor re nes search by selecting from list of project categories as desired
- 3. Actor enters terms into search eld as desired and views a list of top projects
- 4. Actor selects desired project
- 5. System displays detailed project information

Alternative 1: None

- ^ User in S3.4.5

# 3.3.16 Project Browsing Feature 1: Project Browsing Sequence Diagram

# 3.3.17 Project Browsing Feature 2: Project Creation Use Case Description

Actors: User

Summary: User will create a project.

Purpose: To allow users to create projects and make them accessible to other users

Preconditions: User is signed in

# Steps:

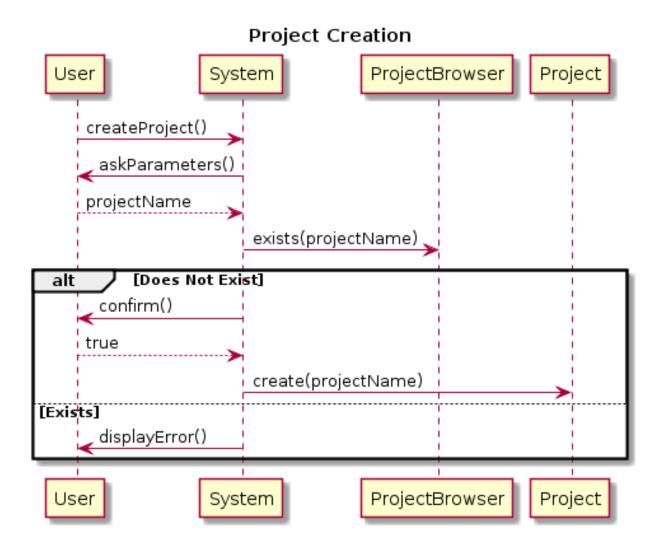

1. User selects Create Project button

- 2. User will enter the information on the project, including its name, goals, and identifying tags.
- 3. If project name does not match any existing project, the system will create a project with the speci ed parameters and set user as an admin for the project.

Alternative 1: Project name matches the name of an existing project and will ask the user to rename it.

- ^ User in S3.4.5
- ^ Project Browser in S3.4.5
- ^ Project in S3.4.5

# 3.3.18 Project Browsing Feature 2: Project Creation Sequence Diagram

## 3.3.19 Project Browsing Feature 3: Project Commenting Use Case Description

Actors: User

Summary: Provide detailed feedback on project ideas

Purpose: To allow users to write longform feedback on projects as necessary.

Preconditions: User is signed in

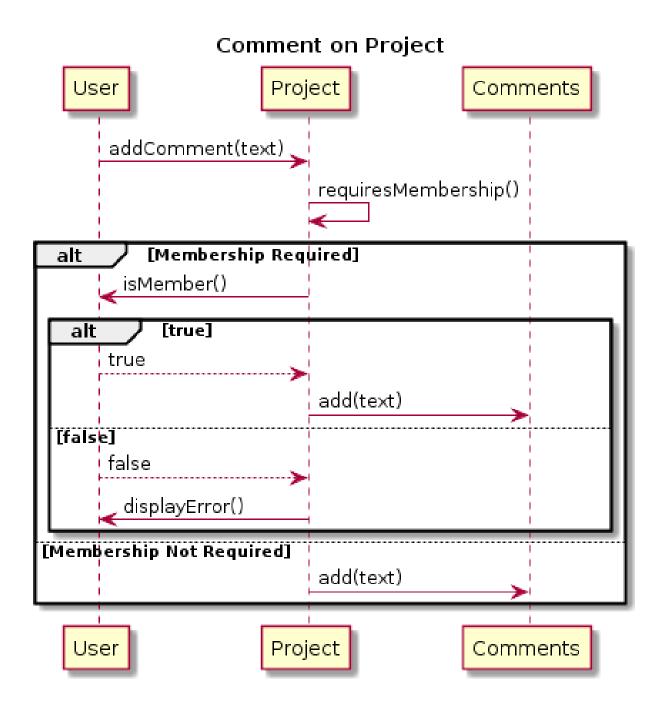

## Steps:

- 1. User selects Comment button
- 2. User types feedback into eld
- 3. User clicks Submit button
- 4. System shows con rmation that feedback was received

Alternative 1: If the project requires comments to be made by project members only and the user is not a project member, the user will be shown an error message.

- ^ User in S3.4.5
- ^ Project in S3.4.5

## 3.3.20 Project Browsing Feature 3: Project Commenting Sequence Diagram

## 3.3.21 Project Browsing Feature 4: Project Voting Use Case Description

Actors: User

Summary: Support promising project ideas or o er criticism to unfavorable ones

Purpose: Allow for feedback and help users search for well received projects

Preconditions: User is signed in

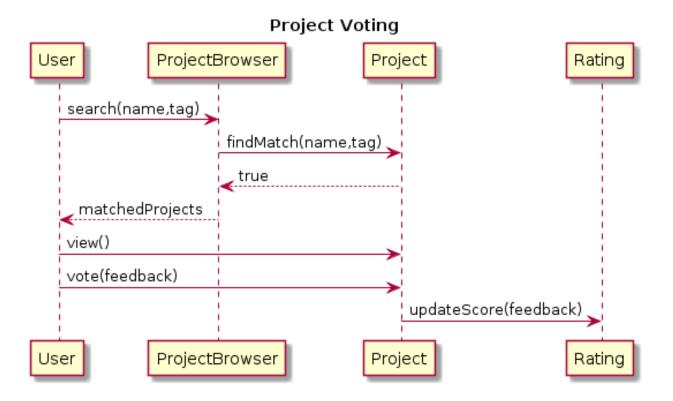

## Steps:

- 1. User selects Browse Project Ideas button
- 2. User re nes search by selecting from list of project categories as desired
- 3. User enters terms into search eld as desired and views a list of top projects
- 4. User selects desired project
- 5. System displays detailed project information
- 6. User selects Up Vote or Down Vote button
- 7. Project receives the vote and updates its total score

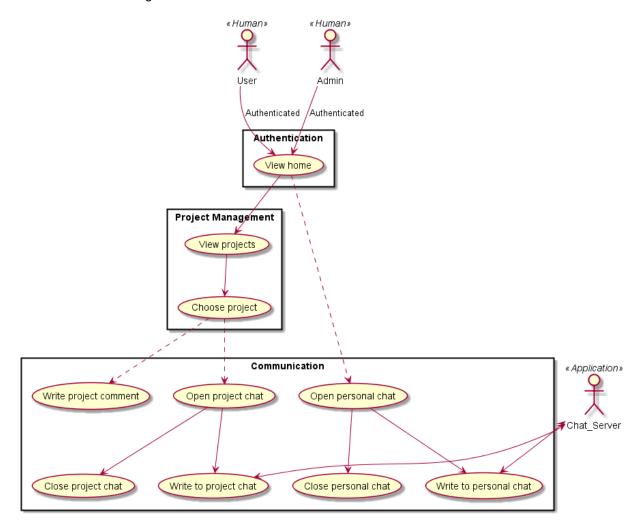

Alternative 1: None

- ^ User in S3.4.5
- ^ Project Browser in S3.4.5
- ^ Project in S3.4.5

# 3.3.22 Project Browsing Feature 4: Project Voting Sequence Diagram

# 3.3.23 Use Case Diagram 3: Communication

## 3.3.24 Communication Feature 1: Read Project Chat Use Case Description

Actors: User

Summary: Open a window to view the conversation in a project

Purpose: Allow users to communicate quickly without permanently taking up screen space in a project

Preconditions: User is signed in and viewing a project

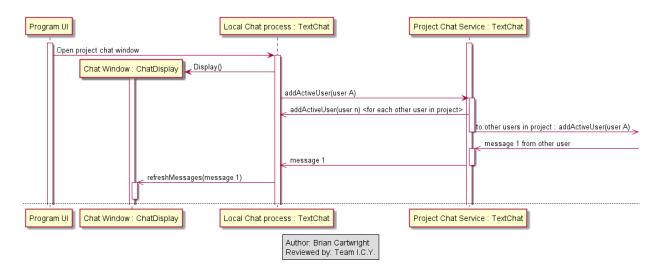

## Steps:

- 1. User selects the "Open Chat" button
- 2. System opens the chat window, and noti es the other users in the project of the new arrival
- 3. System displays any messages from other users in the project in that window until it is closed/left.

## Alternative 1: None

- ^ User
- ^ TextChat
- <sup>^</sup> ChatDisplay
- ^ Message

# 3.3.25 Communication Feature 1: Read Project Chat Sequence Diagram

## 3.3.26 Communication Feature 2: Write to Project Chat Use Case Description

Actors: at least one User

Summary: Contribute to the conversation in a project

Purpose: Allow users to communicate quickly without permanently taking up screen space in a project

Preconditions: User is signed in and has joined the project chat

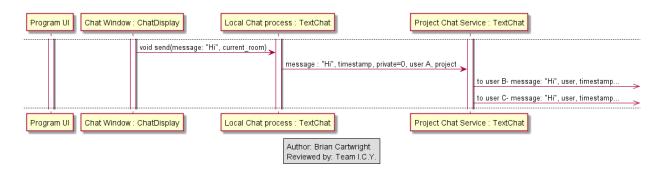

## Steps:

- 1. User types a message in the project chat window and presses Send
- 2. System sends that message to the project server, which delivers it to the other users in the project chat
- 3. Other users may read and/or respond to the message at their leisure

## Alternative 1: None

- ^ User
- ^ TextChat
- ^ ChatDisplay
- ^ Message

# 3.3.27 Feature 2: Write to Project Chat Sequence Diagram

## 3.3.28 Communication Feature 3: Message User by Name Use Case Description

Actors: User

Summary: Start talking an individual user

Purpose: Allow users to communicate outside of a project, or in private

Preconditions: At least one of the users are signed in

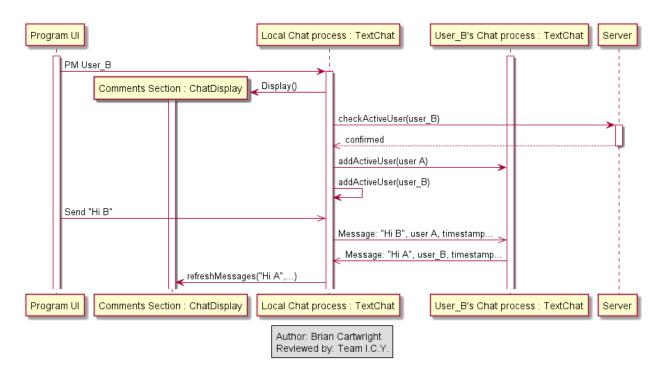

## Steps:

- 1. User selects "Send PM" from the chat menu and types or selects the other user's ID
- 2. System checks to see if the user exists and is online, and if so creates a chat channel for the two users
- 3. Both users then use the chat as normal

Alternative 1: If the second user exists but is o ine, the rst user is noti ed and the second user gets the message from the server the next time they're online.

- ^ User
- ^ TextChat
- ^ ChatDisplay
- ^ Message

## 3.3.29 Feature 3: Message User by Name Sequence Diagram

## 3.3.30 Communication Feature 4: Comment on Project Use Case Description

Actors: User, sometimes also a Project Admin

Summary: Communicate more important info about a project

Purpose: Allow users to record and semi-permanently attach messages to be displayed alongside a project

Preconditions: User is signed in and has joined the project

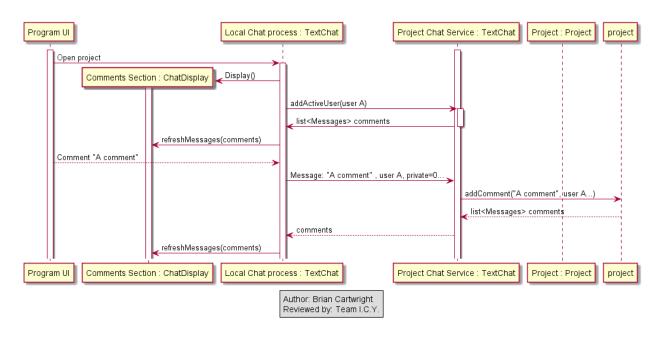

## Steps:

- 1. In a section of the window seperate from temporary chat, the user writes a comment and presses Post
- 2. System sends that message to the project server, which attaches it to the project. The message is then displayed with previous comments in the post.
- 3. Other users may read and/or respond to the message at their leisure

Alternative 1: A project administrator may remove the post.

- ^ User
- ^ TextChat
- ^ ChatDisplay
- ^ Message

## 3.3.31 Feature 4: Comment on Project Sequence Diagram

## 3.3.32 Communication Feature 4: Comment on Project Use Case Description

Actors: User or Admin

Summary: Clean up when a user leaves a project chat

Purpose: Close the window and remove the user from the list of active users in the project chat so they don't receive more messages

Preconditions: User is signed in and has joined the project chat

#### Steps:

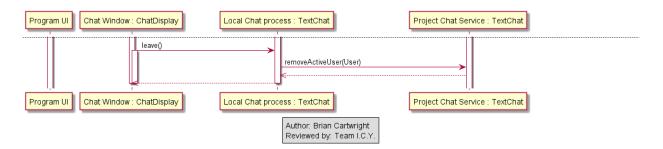

- 1. User clicks "close" on the project chat window
- 2. System minimizes the window, and removes the user from the list of active users in the project chat

Alternatives: Step one is skipped if one of the following happen:

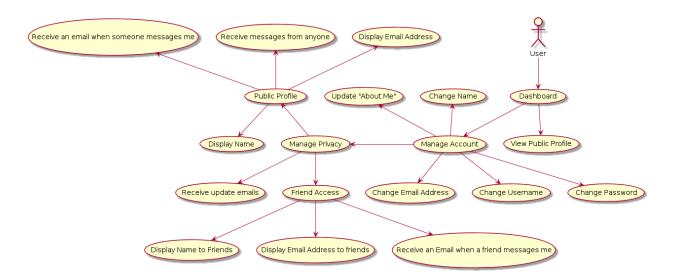

- 1. The user closes the entire project or program windows
- 2. The user is idle for too long
- 3. An administrator removes them from the project or project chat

- ^ User
- ^ TextChat
- ^ ChatDisplay
- ^ Message

# 3.3.38 Project Management Feature 1: Compile and Execute Project Use Case Description (dani2918)

Actors: User

Goals: Compile and execute active project

Pre-conditions: Actor is logged in, navigated to desired project.

Summary: User compiles a project and the project executes.

Related use cases:

## Steps:

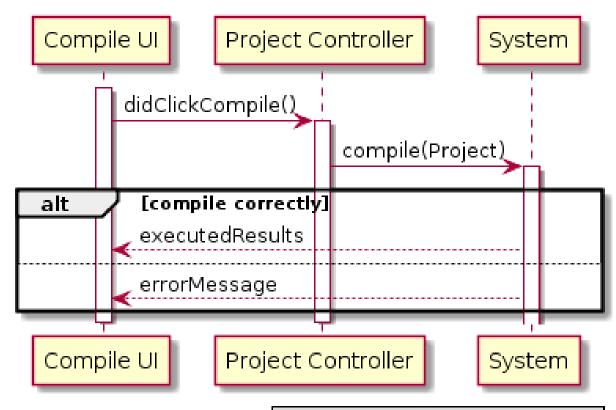

1. User clicks Compile

- 2. System displays results of compilation
- 3. System executes compiled project.

Alternatives: Compilation fails.

Post-conditions: None.

## 3.3.40 Project Management Feature 2: Create project Use Case Description(dani2918)

Actors: User

Goals: Create a new project.

Pre-conditions: Actor is logged in.

Summary: User creates a new project with a description and includes any desired les.

Related use cases: Import le

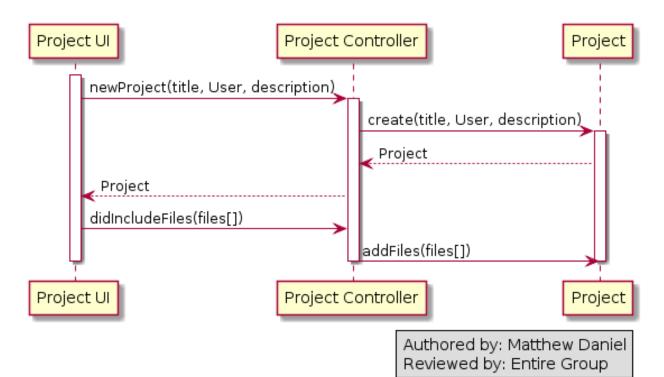

## Steps:

- 1. User clicks New Project.
- 2. User gives project a title.
- 3. User adds an applicable description.
- 4. User imports any les by clicking Import.
- 5. User clicks Create.
- 6. System imports les and instantiates project.

Alternatives: None.

Post-conditions: None.

# 3.3.41 Project Management Feature 2: Create project Sequence Diagram(dani2918)

## 3.3.42 Project Management Feature 3: Delete Project Use Case Description (dani2918)

Actors: Project Administrator, sQuire Administrator.

Goals: Remove project from sQuire sever.

Pre-conditions: Actor is logged in, viewing desired project.

Summary: Actor chooses to delete or remove an irrelevant or inappropriate project.

Related use cases: Create project

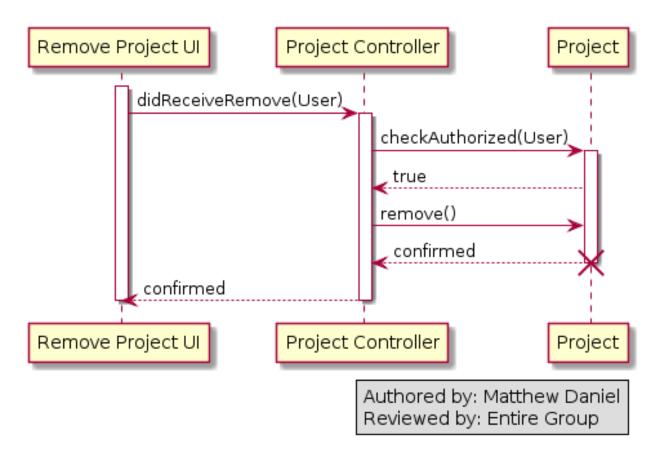

Steps:

- 1. Actor clicks Delete icon on active project.
- 2. Delete dialog opens.
- 3. Actor presses Delete.
- 4. Con rmation window is displayed.
- 5. Actor con rms or disregards deletion.
- 6. System noti es collaborators that project was deleted.

Alternatives: Actor clicks Cancel.

Post-conditions: None.

## 3.3.44 Project Management Feature 4: Request to Join Project Use Case Description (dani2918)

Actors: User

Goals: Join an existing project.

Pre-conditions: Actor is logged in, viewing desired project.

Summary: Actor sends a request to join as a collaborator on a project

Related use cases: Manage request to join project

## Steps:

1. Actor clicks Join project.

2. Noti cation is sent to project administrator for review.

Alternatives: None.

Post-conditions: None.

# 3.3.45 Project Management Feature 5: Manage Request to Join Project Use Case Description (dani2918)

Actors: Project Administrator

Goals: Approve.

Pre-conditions: Actor is logged in, viewing desired project.

Summary: Actor approves/rejects a user who has requested to join as a collaborator on a project.

Related use cases: Request to join project

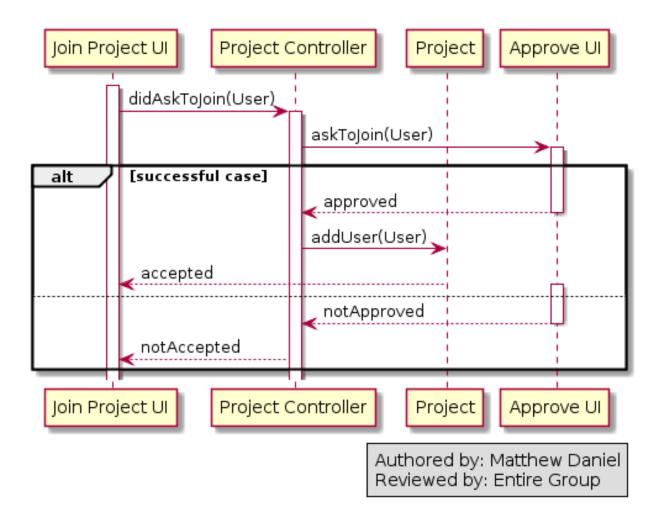

## Steps:

- 1. Actor clicks Review join requests.
- 2. Actor reviews information about potential collaborator.
- 3. Actor clicks Approve User to approve a collaborator or Reject user to reject a collaborator.
- 4. System noti es user that they have been approved/rejected.

Alternatives: None.

Post-conditions: None.

## 3.3.47 Project Management Feature 6: Leave Project Use Case Description (dani2918)

Actors: User

Goals: Remove actor as a collaborator from project.

Pre-conditions: logged in, viewing desired project, collaborator on desired project, not project owner.

Summary: A member of a project leaves said project, leaving the project intact.

Related use cases: Delete project

## Steps:

1. User clicks Leave Project.

2. System prompts user to con rm decision.

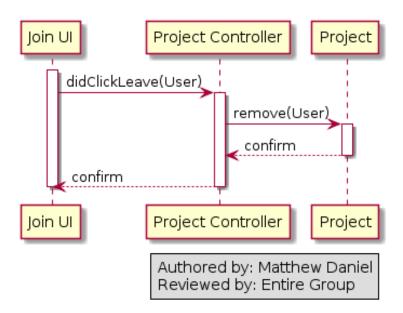

3. User clicks "Con rm".

4. User is removed from project member list.

Alternatives: User clicks "Cancel" at step 4.

Post-conditions: None.

# 3.3.48 Project Management Feature 6: Leave Project Sequence Diagram (dani2918)

## 3.3.49 Project Management Feature 7: Invite to Project Use Case Description (dani2918)

Actors: Project Administrator, Authorized Project Collaborator (User).

Goals: Invite user(s) to collaborate on project

Pre-conditions: Actor is viewing project which he or she created, is logged in

Summary: A project administrator requests help from a user on a project. The sQuire system facilitates the invitation process

Related use cases: Respond to project invite

#### Steps:

- 1. Actor clicks Invite User.
- 2. Actor enters the username(s) of the user(s) to be invited to the project.
- 3. Actor enters any message to the user(s) in a text box.
- 4. Actor clicks Send invite.
- 5. System sends noti cation of invite to user(s).

Alternatives: Actor clicks Cancel. Post-conditions: None.

## 3.3.50 Project Management Feature 8: Respond to Project Invite Use Case Diagram (dani2918)

Actors: User

Goals: Actor responds to an invitation to a project.

Pre-conditions: Actor is signed in, viewing invitation.

Summary: Actor receives noti cation that he or she has been invited to a project and either accepts the invitation or declines it.

Related use cases: Invite to project

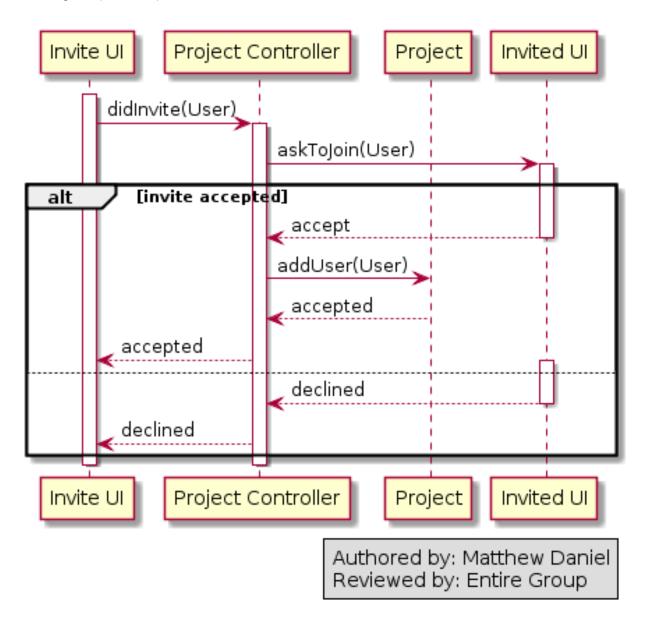

## Steps:

- 1. Actor clicks Respond to Invitation.
- 2. Actor clicks Accept or Reject.
- 3. Actor types any message to invitation-sender in text box.
- 4. Actor clicks Con rm.

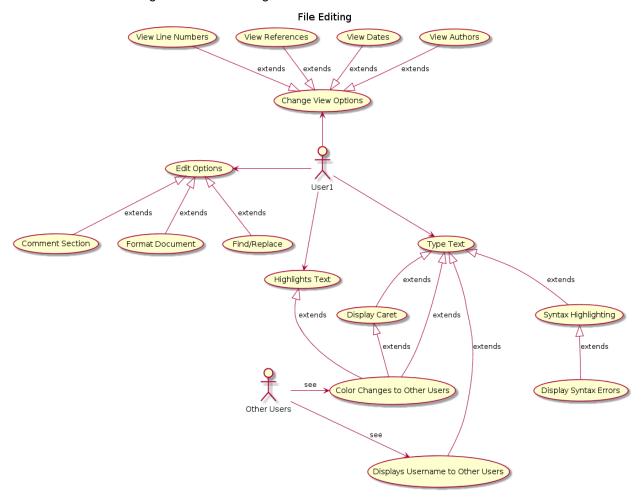

Alternatives: Actor clicks Cancel.

Post-conditions: Actor becomes collaborator on project if invitation was accepted.

- 2. FileLineHistory

# 3.3.58 File Editing Feature 3: View Dates Sequence Diagram

### 3.3.59 File Editing Feature 4: View Authors Use Case Description

Name: View Authors

Category: File Editing

Actor: User

Summary: Allows the user to view the last author that edited each of line of the document.

Purpose: This is an accountability tool allowing other users to identify who is responsible for a change to a document.

#### Preconditions:

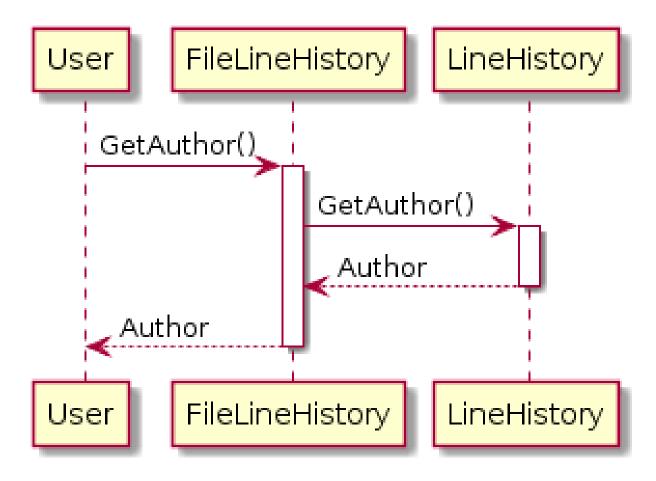

- 1. Must be registered.
- 2. Must be logged in.
- 3. User has read permission.
- 4. A le is open.

# Steps:

- 1. User selects the View menu option.
- 2. System displays a drop-down with various options.
- 3. User selects the View Authors option.
- 4. System displays the name of the last editor of each line of the document.

- 1. FileLineHistory
- 2. LineHistory

# 3.3.60 File Editing Feature 4: View Author Sequence Diagram

### 3.3.61 File Editing Feature 5: Format Document Use Case Description

Name: Format Document

Category: File Editing

Actor: User

Summary: Allows the user to format the document to a speci ed format

Purpose: An easy tool for making sweeping changes to a large part of a document.

#### Preconditions:

- 1. Must be registered.
- 2. Must be logged in.
- 3. User has read/write permission.
- 4. A le is open.
- 5. The document has formatting options set.

#### Steps:

- 1. User selects the Edit menu option.
- 2. System displays a drop-down with various options.
- 3. User selects the Format Document option.
- 4. System formats the current document to the formatting settings currently set.

#### Alternatives:

1. If no formatting settings are currently set, display a dialog box after step 3 and give the option for the user to do so now.

#### Relevant Classes:

1. TextOperation

### 3.3.62 File Editing Feature 6: Find/Replace Use Case Description

Name: Find/Replace

Category: File Editing

Actor: User

Summary: Allows the user to nd and/or replace phrases.

Purpose: This is a powerful tool that allows a user to make safer, quicker, and more e cient changes to a document.

#### Preconditions:

- 1. Must be registered.
- 2. Must be logged in.
- 3. User has read/write permission.
- 4. A le is open.

#### Steps:

- 1. User selects the Edit menu option.
- 2. System displays a drop-down with various options.
- 3. User selects the Find/Replace option.
- 4. System displays a small form in an unobtrusive location.
- 5. User enter the phrase to nd and selects nd.
- 6. System highlights and focuses on the rst occurrence of the phrase and all highlights all other occurrences.

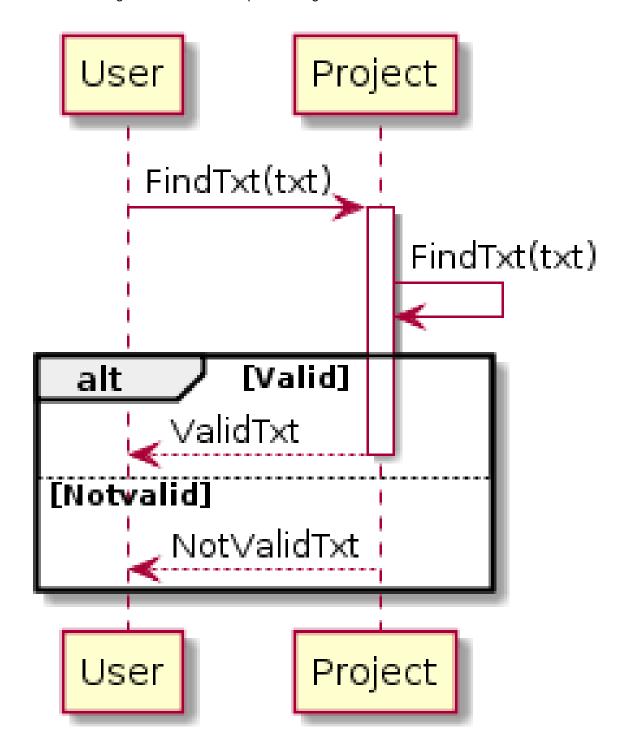

#### Alternatives:

1. User selects option to replace in step 5 and enters a phrase with which to replace the found occurrences of the searched phrase. The system replaces each occurrence.

#### Relevant Classes:

1. Project

### 3.3.63 File Editing Feature 6: Find Sequence Diagram

### 3.3.64 File Editing Feature 7: Comment Section Use Case Description

Name: Comment Section

Category: File Editing

Actor: User

Summary: Allows the user to comment out a part of a document.

Purpose: A useful and quick way to disable a large part of a document.

#### Preconditions:

- 1. Must be registered.
- 2. Must be logged in.
- 3. A le is open.
- 4. User has read/write permission.
- 5. Current open document supports commenting.

#### Steps:

- 1. User selects the Edit menu option.
- 2. System displays a drop-down with various options.
- 3. User selects the Comment Section option.
- 4. System comments the selected area.

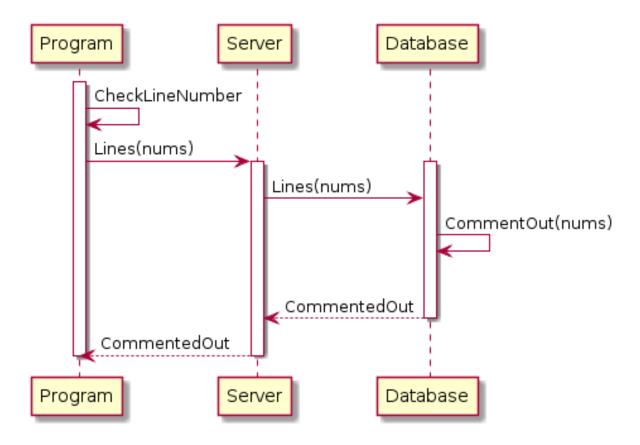

### Alternatives:

1. If document does not support commenting, display a dialog box telling the user.

#### Relevant Classes:

1. TextOperation

### 3.3.66 File Editing Feature 8: Display Typing User Use Case Description

Name: Display Typing User

Category: File Editing

#### Actors:

- 1. User
- 2. Other Users

Summary: As the user types, the system displays their name, their typing, and their caret, in a di erent color, to other users.

Purpose: Di erentiate who is typing what.

#### Preconditions:

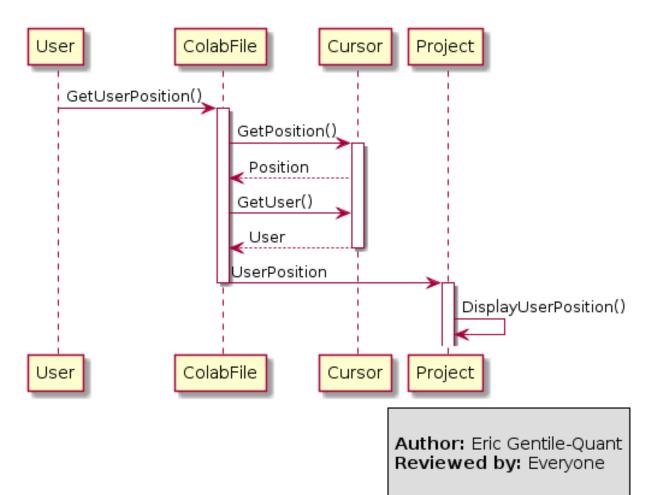

- 1. Must be registered.
- 2. Must be logged in.
- 3. User has read/write permission.
- 4. A le is open.
- 5. Other users have the same document open.

#### Steps:

- 1. User begins typing.
- 2. System displays the user's typing, the user's name, and the user's caret, in a di erent color, to Other Users.
- 3. Other Users see User typing, his username, and his caret, in a di erent color.

# 3.3.67 File Editing Feature 8: Display Typing User Sequence Diagram

# 3.3.68 File Editing Feature 9: Display Syntax Errors Use Case Description

Name: Display Syntax Errors

Category: File Editing

Actor: User

Summary: As the user types code, the editor will underline syntax errors with a red line.

Purpose: Aids the user is writing correct code.

#### Preconditions:

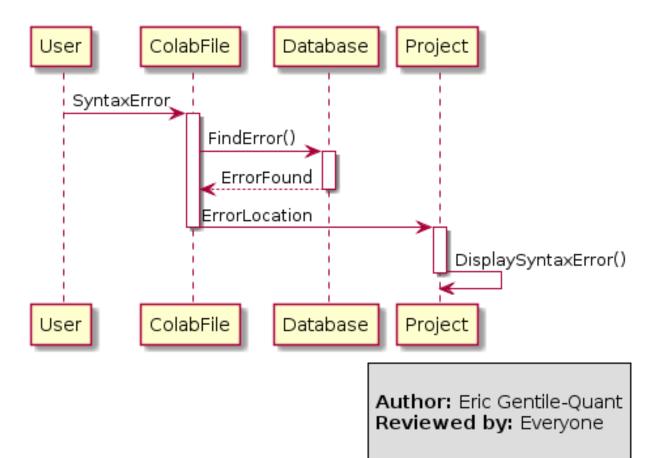

- 1. Must be registered.
- 2. Must be logged in.
- 3. User has read/write permission.
- 4. A supported code le is open.

# Steps:

- 1. User begins typing.
- 2. System displays any syntax errors as a red underline under the incorrect section.

- 1. ColabFile
- 2. Project

# 3.3.69 File Editing Feature 9: Display Syntax Errors Sequence Diagram

# 3.3.70 File Editing Feature 10: Display Syntax Highlighting Use Case Description

Name: Display Syntax Highlighting

Category: File Editing

Actor: User

Summary: As the user types code, the editor will change font color for di erent code structures and keywords.

Purpose: Aids the user is writing code and identifying key code parts.

#### Preconditions:

- 1. Must be registered.
- 2. Must be logged in.
- 3. User has read/write permission.
- 4. A supported code le is open.

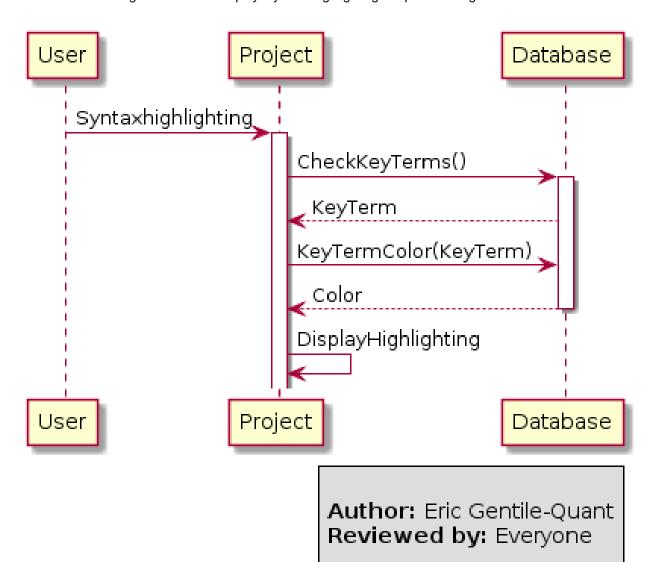

# Steps:

- 1. User begins typing.
- 2. System automatically colors special code structures and keywords.

### 3.3.73 File Management Feature 1: Open File Use Case Description

Actors: User

Summary: The user selects a le to open based on a lename, which is then opened by the software.

Purpose: To open a le in the program.

Preconditions: The desired le must already exist.

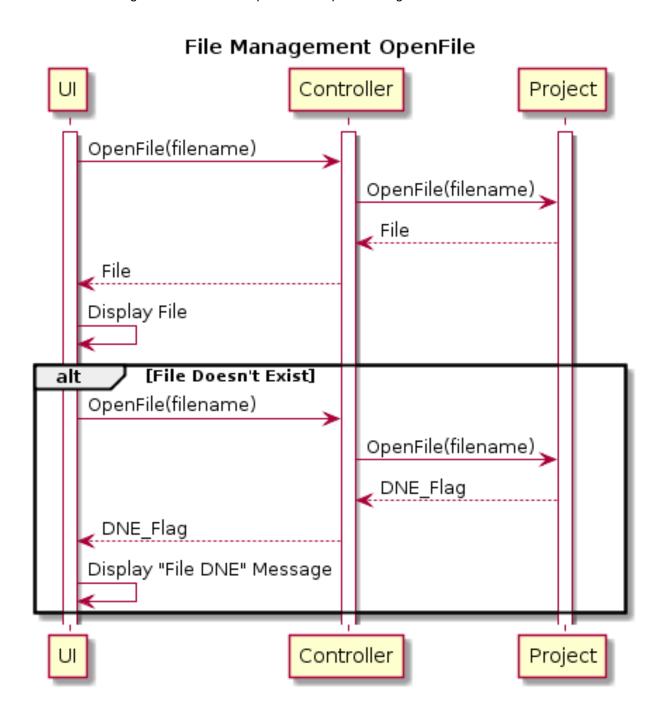

# Steps:

- 1. User clicks Open File button.
- 2. System prompts the user to select le to open from a list of existing les.
- 3. User selects desired le and clicks Submit button.
- 4. System opens selected le and displays it.

Alternative 1: The User decides they don't want to open a le and presses Cancel at step 3.

- ^ User in S3.4.5

# 3.3.75 File Management Feature 2: Close File Use Case Description

Actors: User

Summary: The user chooses to close the le they are working on.

Purpose: To close a le in the program.

Preconditions: The desired le must already exist, and be already opened by the User.

# Steps:

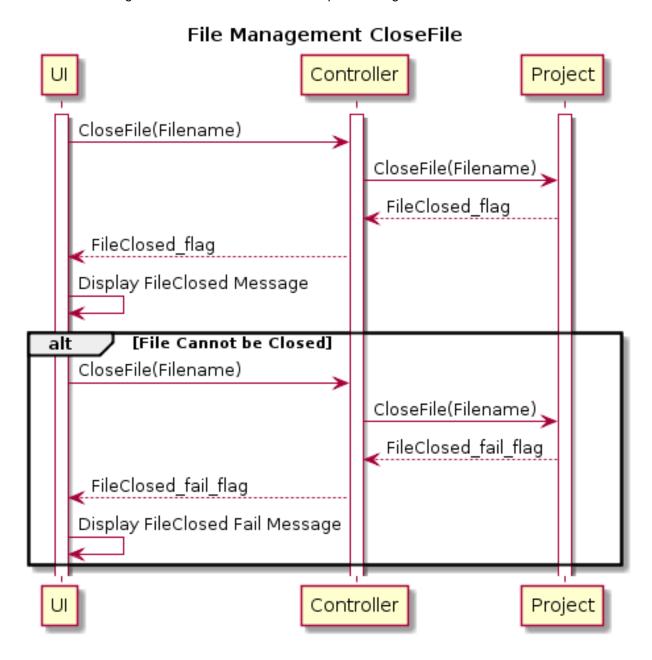

1. User clicks Close File button.

2. System closes the le and updates the Controller's status on the le being open.

Alternative 1: The le cannot be closed for some reason.

- ^ User in S3.4.5

# 3.3.77 File Management Feature 3: Save File Use Case Description

Actors: User

Summary: The user chooses to save the le they are currently working on.

Purpose: To save a le in the program.

Preconditions: The desired le must already exist, and be opened by the user.

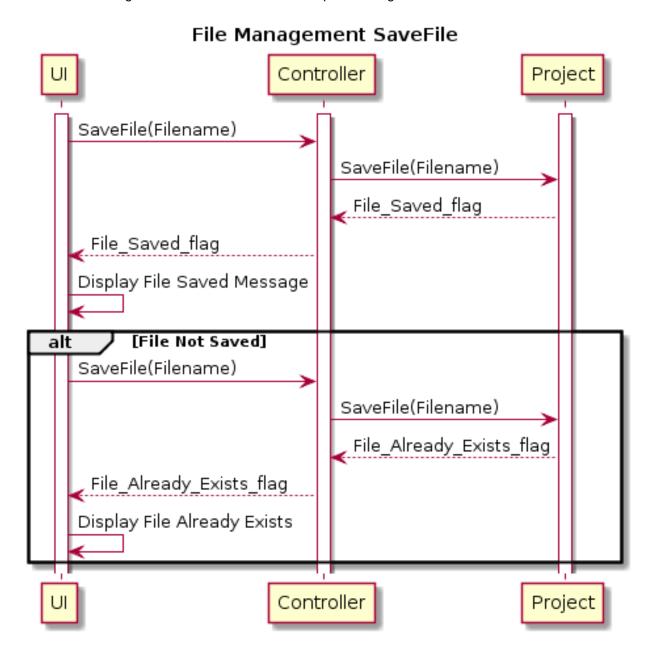

# Steps:

- 1. User clicks Save File button.
- 2. System prompts the user to choose a name to save the le under.
- 3. User selects desired name and clicks Submit button.
- 4. System saves selected le and allows the user to keep working.

Alternative 1: The User decides they don't want to save the le and presses Cancel at step 3.

- ^ User in S3.4.5

### 3.3.79 File Management Feature 4: Add File Use Case Description

Actors: User

Summary: The user chooses to add a le to the directory.

Purpose: To add a le to a directory.

Preconditions: The desired le must already exist.

# Steps:

1. User clicks Add File button.

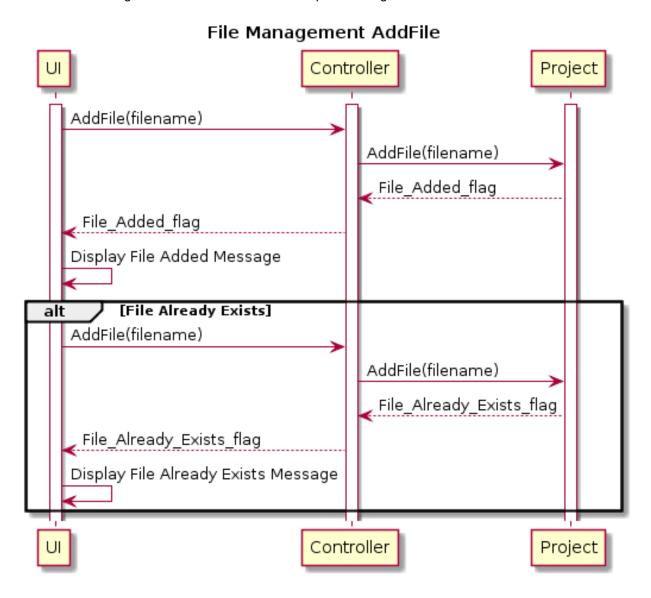

- 2. System prompts the user to choose a le to add to a directory..
- 3. User selects desired le and clicks Submit button.
- 4. System prompts the user to choose a directory to add the le to.
- 5. User selects directory to add the le to and click Submit button.
- 6. System adds the le to the selected directory and lets the user return to their work.

Alternative 1: The User decides they don't want to add the le and presses Cancel at step 3.

Alternative 2: The User decides, after they chose a le, not to add it to a directory and clicks Cancel at step 5.

- ^ User in S3.4.5
- ^ UI to be added.

### 3.4 CLASS DIAGRAMS

### 3.4.1 Class Diagram 1: File Management

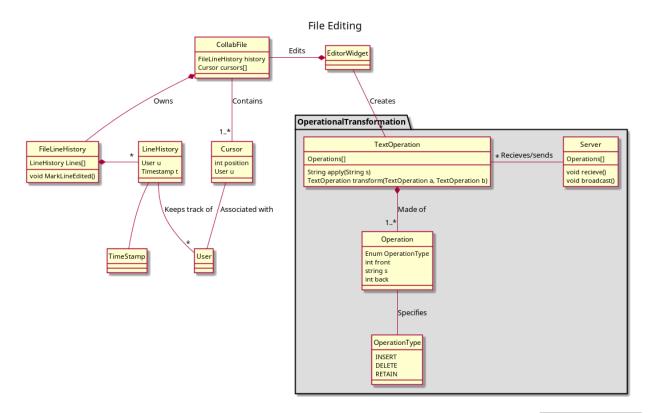

### 3.4.2 Class Diagram Description 1: File Management Description

### Interfaces:

- ^ The Observer interface requires its implementers to implement a method with the following signature: void Observe(T) . The purpose of this method is for classes to implement ways in which to observe other classes. We foresee th€ileController class implementing this interface in order to observe changes inCollabFile objects.
- The Runnable interface requires its implementers to implement a method with the following signature: void Run(Task) where Task is a method that can be run in a separate thread. The File Controller class will implement this interface in order to execute its IO operations in a separate thread. This will keep the UI thread free and our program responsive.
- The Serializable interface requires its implementers to implement thevoid Serialize<T>() method and serializes objects of typeT. It also requires the implementation of the T Deserialize<T>() method which will operate on a serialized string object and return an instantiated object of typeT.
- ^ The Observableinterface requires its implementers to have a list of observers and a method to notify its observers of changes to itself. The purpose of this implementation is to communicate with the FileController object and notify it when a CollabFile changes.
- ^ The Downloadableinterface requires its implementers to implement a method with the following signature: int Download() . The purpose of this method is for classes to implement ways in which their objects can be downloaded. Theint return type will be used as a status code. We foresee this interface being used with the Project and CollabFile classes, as the diagram shows, allowing users to download les or projects with the Download() method.

- The FileController class will manage theCollabFile objects in the Project class. It will do so by storing a list of les and a dictionary of its methods that can be run in a separate thread. Its methods all deal with managing les. It will implement the Observer and Runnable interfaces. Refer to the interfaces list above to see the details of such implementations.
- The Project class represents the entire project that users work on. This includes users, les, permissions, etc. For the sake of simplicity, this diagram only lists properties and methods relating to le editing. Objects of type Project will have a FileController and a root CollabFile as per a le-tree structure. The Project class must also implement theDownloadableinterface in order to specify how projects are downloaded.Refer to the interfaces list above to see the details of this implementation.
- the CollabFile class represents a le in aProject . It extends the File class for the purposes of allowing collaborative editing, among other project functions. It implements the Serializable interface to allow its information to be transported over the internet in the best possible format. This requires the implementation of the void Serialize<T>() and T Deserialize<SerializedString>() methods which will handle serialization and deserialization. This class also implements the bservable interface which will specify how it communicates with the FileController class in order to notify of relevant changes to CollabFile objects. This requires the implementation of a list of observers and a method to notify observers. Lastly, it implements the Downloadble interface which will specify how CollabFile objects are to be downloaded. Refer to the interfaces list above for more details of such implementations.

### 3.4.3 Class Diagram 2: File Editing

Author: Brandon Ratcliff Reviewed by: Everyone

### 3.4.4 Class Diagram Description 2: File Editing Description

### Editor:

- The CollabFile class is a class used in many of the other class diagrams in this project. It is the general class containing all the methods and variables for managing a le. It contains aFileLineHistory object. CollabFile has a list of Cursor objects, one for every user editing the le..
- ^ The User class is a class used in many of the class diagrams. It represents a single user of the sQuire program.
- ^ The TimeStamp class is used in several other places. It represents a date and time.
- ^ The FileLineHistory class is a class that keeps track of who last edited every line in the le. This will be used to display the changes inside the editor. It does this by having an array (one element per line in the le) of LineHistory objects.
- The LineHistory class is contains the information used by theFileLineHistory class. It contains a User the last one to edit a particular line and a Timestamp (when the line was last edited). More elds can easily be added to this if it turns out there is more information we'd like to keep track of on a line-by-line basis.
- The EditorWidget class is something that we will (hopefully) not write ourselves. It will be the editor widget we use for providing the code editor. Preliminary research found RSyntaxtTextArea (https://github.com/bobbylight/RSyntaxTextArea). This looks like a good t because it has syntax highlighting, auto completion, code analysis, and of course, support from java. It also has a simple plugin architecture, so it looks like it would be easy to extend to our needs. More research needs to be done to gure out the exact class structure for this.
- The Cursor class is made up of a ser and a position within a le- everything that is needed to display a users cursor inside the editor.

### OperationalTransform:

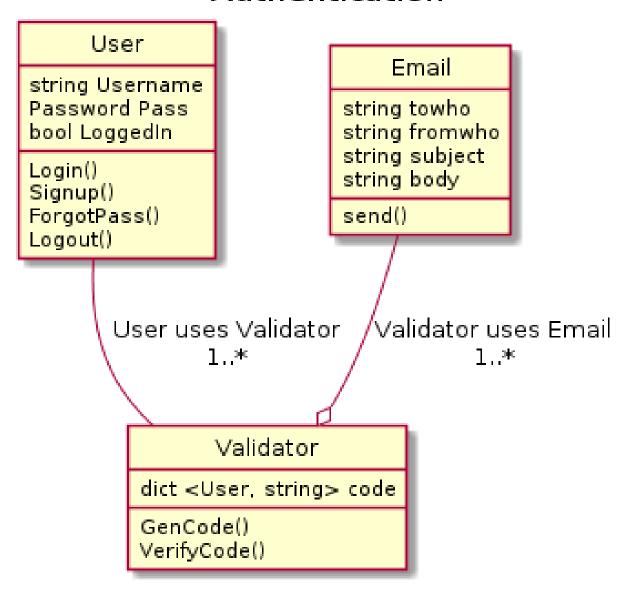

I organized this one into a separate package because that's how I'm pretty sure we'll write it. The OperationalTransform algorithm is a collaborative editing algorithm used to allow multiple people to edit the same document at the same time, and keep the documents in sync. Ideally, we would use a pre-built library for this, as the algorithm is quite complex and there are lots of special cases, but I was unable to nd one written in Java. Our best best will probably be to port an existing library in another language. The clearest, best documented implementation I found was OT.js (https://github.com/Operational-Transformation/ot.js/). The following classes are the main data structures implemented by this version of Operational Transformation.

- The TextOperation class represents a sequence **O** peration objects, or changes. The TextOperation can then be applied to a string, or transformed with anther TextOperation (from another client) in order account for changes that occurred simultaneously. See the Operational Transformation algorithm for more details.
- ^ The Operation class represents a speci c operation. This contains an Operation Type , a integer front, which speci es the number of characters before the change, a string s, which contains the actual character changed (ex, inserted or deleted). And then an integer back, which contains the number of characters until the end of the document.
- ^ The OperationType Enum is used to specify what type of operation aOperation is. Type can be either an INSERT, when character(s) are inserted to a document, DELETE, when character(s) are deleted from a document, or RETAIN, used to shift other operations.

^ the Server class is a class that will be running on the server to sync changes between clients. It's job it to listen for TextOperations from all connected clients, and when it receives one, broadcast that change to all connected clients.

### 3.4.5 Class Diagram 3: Authentication

# Authentication

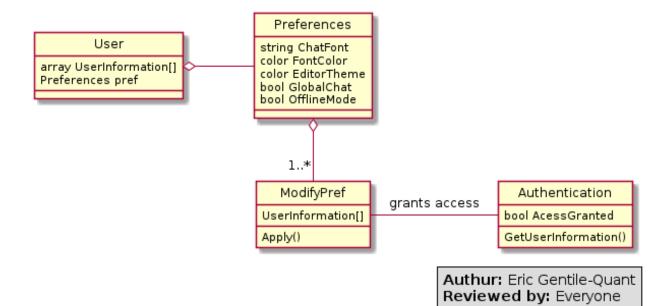

Authored by: Joel Doumit (doum6708)

Reviewed by: Team I.C.Y

### 3.4.6 Class Diagram Description 3: Authentication Description

- ^ The User class represents the main user of the entire program. It details the basic information of each individual user, and allows each user the ability to create an account, to log into an existing account, and once logged in, to log out of the user account. It also allows a user to change his/her password, which involves the other classes.
- ^ The Email class allows the program to send emails to Users who have signed up, or are signing up. It stores User information as a series of strings to be used by the the the theorem () function, which sends validation codes to Users' email addresses.
- ^ The Validator class will run validation functions when called to do so by the User. Upon a User indicating they would like to change/have forgotten their password, it generates a validation code for that particular User, which it then stores in a dictionary. This validation code is sent to Users by means of thesend() function denoted earlier.

### 3.4.7 Class Diagram 4: User Preferences

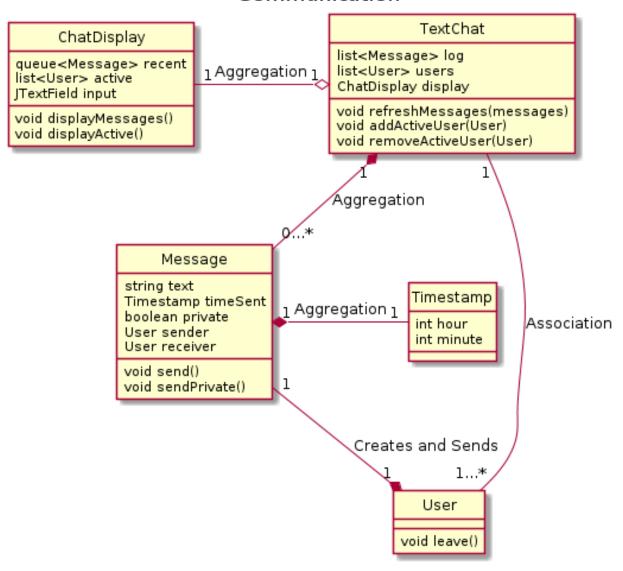

### 3.4.8 Class Diagram Description 4: User Preferences Description

- <sup>^</sup> User: Represents the human user of the program. It will hold the user's pro le information so that it can be validated later.
- ^ Preferences: Holds all the user's account preferences. This includes pro le picture, chat font, chat color, ect.
- ^ ModifyPref: Allows the user to modify his or her's preferences.
- Authentication: Authenticates the user's username and password to allow access to make changes on their account.

### 3.4.9 Class Diagram 5: Communication

## Communication

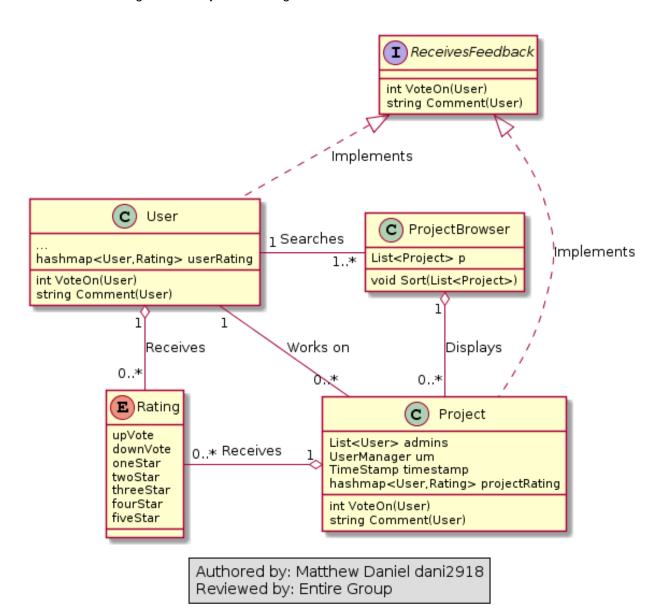

Authored By: Max Welch Peer Reviewed By: Team I.C.Y.

# 3.4.10 Class Diagram Description 5: Communication Description Classes:

- ^ TextChat: The master class to manage the messages, users, and display of the system.
- ^ ChatDisplay: Displays relevant information including most recent 20 messages and active users
- ^ User: Users interacting with the chat system.
- ^ Message: Messages sent by users to TextChat, contain a string, timestamp, and sender/receiver data.
- ^ Timestamp: Recorded time of when message was sent.

### 3.4.11 Class Diagram 6: Project Browsing

### 3.4.12 Class Diagram Description 6: Project Browsing

### Enums:

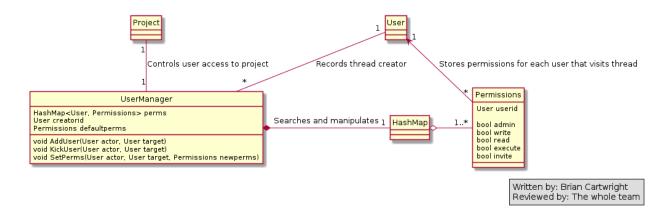

^ The Rating enum produces a value based upon the user's desired rating of another user or a project.

### Interfaces:

The Receives Feedbacknterface requires its implementers to implement two methods:int VoteOnUser(User) which returns a value based on a user's rating, and tring Comment(User) , which leaves feedback in the form of a comment.

- ^ The User class will be the class, shared across many of the class diagrams, that stores information about a user. The User class will have not only the methods and elds shown in this diagram, but a concatenation of the ones shown here and all other methods and elds from the other diagrams. Here, the User class implements the ReceivesFeedback interface so that other users may leave comments/reviews of a User object, and so that they may receive an accompanying rating from one to ve stars. In relation to browsing projects, a User is the agent who searches a ProjectBrower object and works on a Project object.
- ^ The Project class will also have the methods and elds of other class diagrams, similar to the User class above. Here, the Project class implements the ReceivesFeedback interface so that users may leave comments/reviews on projects, as well as vote up or down on projects that they come across. Projects are displayed in the ProjectBroswer class and worked on by users.
- The ProjectBrowser class contains a search-able list of zero or more projects tailored to a user's search. Users browse the list in order to nd projects of interest.

### 3.4.13 Class Diagram 7: Project User Management

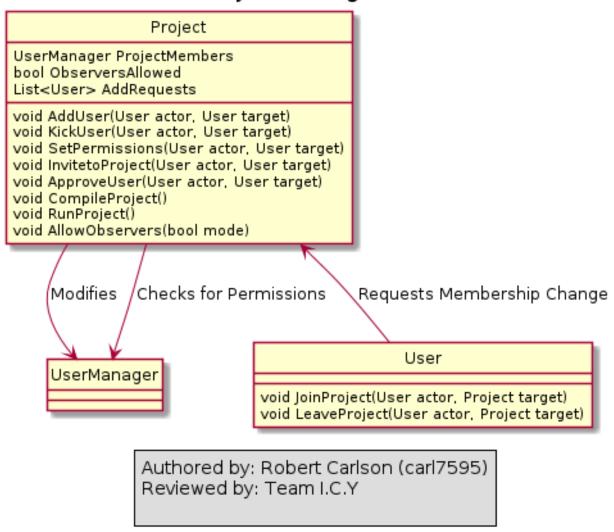

### 3.4.14 Class Diagram Description 7: Project User Management Description

- ^ The User class contains the pro les of everyone who uses sQuire, and identi es anyone who tries to access a board.
- ^ The Project class contains all of the information pertinent to an individual project, including one UserManager, which the client uses to control what kind of access each user has to that speci c project.
- ^ The UserManager class is referenced to check if a user has permission to read, modify, or run a project, or invite, ban, or change the permissions of another user. It does this by updating and checking against a HashMap of Permissions idexed by User. It records the User pro le of the project creator to prevent the creator being demoted by another admin. It also contains a set of Permissions to use by default, before users are manually added to the project. The functions AddUser, KickUser, and SetPerms all modify the permissions HashMap after checking against it to make sure the active user has the authority to change the permissions of the target user.
- ^ The HashMap class, in this case, functions as a permissions lookup table. It's indexed by User, and for each User in it there's one set of Permissions that it returns.
- ^ The Permissions class is a set of bools that store whether each User has permission (within the instance's parent project) to read, write, execute the project, invite users, and/or modify the permissions of other users regarding the project.

### 3.4.15 Class Diagram 8: Project Management

# Project Management
